Points of improvement

1. **Solved** In safari, chrome and firefox on iPhone 5s, the form for uploading a profile picture is wonky. "Välj fil" looks squeezed between "Välj en bild att ladda upp som din profilbild" and the upload-button, and is somewhat aligned to the right.
2. **Solved** In safari on Mac and safari, chrome and firefox on iPhone 5s uploading a profile picture works, but when clicking on the upload-button the popup for choosing a file opens again.
3. **Solved** In the friendslist I am unable to start a chat just by clicking on the chat-symbol next to the friends name.
4. **Solved** Unable to create new chat room when there are no chat rooms already created.

Analysis

((Describe the feeling of the system, does it feel stable/shaky, what parts are good, what needs to be worked on.))

The system feels stable on the majority of the devices it was tested on. Only thing that makes it feel unstable is that one is not able to create a chat room with a new user that doesn't have any chat rooms created from before.

Another thing that wasn't working as expected was the profile picture upload. All devices were able to upload a profile picture, but when clicking the upload button the popup where to choose a file was opened again on Mac safari and iPhone 5s safari, chrome and firefox.

Further explanation to what needs to be worked on to get all test cases to completely pass is stated in the **Points of improvement** above.

The system feels stable on:

- All of the devices listed above, with exception for the creation of new chat rooms not working as expected.
