Below is an alphabetical wordlist with definitions as they apply to the RedRiver project.

Admin – An application user with certain raised privileges e.g. the ability to delete accounts of normal users.

API – Application Programming Interface – this is a set of clearly defined methods of communication between software components. In the case of this project, the api is used for communication between the client and the server.

User – A standard application user with no raised privileges.

Superuser – An application user with the ability to raise and lower the privileges of an admin user.
